## 1. Overview

A simple command line tool reading and converting TGF data to

- PLANTUML
- CSV
- JSON
- YAML

Following command line options are available

```
Usage: tgfMain [-hV] [--convert-csv] [--convert-json] [--convert-puml]
               [--convert-puml-mindmap] [--convert-puml-wbs] [--convert-aml]
               [--overwrite-outputfile] [-f=<tgfFile>] [-o=<outputFile>]
parse, and convert TGF file format
  --convert-csv           convert TGF to csv
  --convert-json          convert TGF to json
  --convert-puml          convert TGF to puml
  --convert-puml-mindmap  convert TGF to puml mindmap
  --convert-puml-wbs      convert TGF to puml wbs
  --convert-aml           convert TGF to aml
-f, --file=<tgfFile>     read from TGF file, if not specified read TGF from
                           stdin
-h, --help               Show this help message and exit.
-o, --output=<outputFile> write to file, if not specified write to stdout
  --overwrite-outputfile overwrite existing output file
-V, --version            Print version information and exit.
```

## 2. TGF Format

TGF stands for Trivial-Graphic-Format. It simply defines a number of nodes, and edges.

The file syntax is simple:

```
file := node_list
      '#'
      edge_list

node_list := node_item node_list node_item []
node_item := node_id ' ' [node_name]
edge_list := edge_item edge_list edge_item
edge_item := source_node_id ' ' target_node_id ' ' [edge_name]
source_node_id := node_id
target_node_id := node_id
```

An simple example with 2 nodes, and 1 edge:

```
1 Alice
2 Bob
#
2 1 hello
```

### 3. Use Case Generate TGF from Maven dependency:tree

You can generate a maven dependency tree in TGF-Format, like

```
mvn -DoutputTpe=tgf -DoutputFile=dependenc_tree.tgf dependency:tree
```

Next you can convert the file dependency\_tree.tgf using this command line tool, like

```
java -jar target/tgftools-1.0-SNAPSHOT-tgfmmain.jar \
  --file=dependenc_tree.tgf --convert-puml
```

The above command will read the file dependency\_tree.tgf, and output a plantuml representation to stdout.

### 4. Use Case Convert TGF to CSV

You can convert a TGF file to CSV using the command line option -convert-csv.

The first column type describes if the csv row describes either a node, or an edge.

For a node entry, the first column describes the node type, and the second column describes the node name. The column *ab* is always empty for a node entry.

For an edge entry, the first column describes the start node of the edge, the second column describes the end node of the edge. Finally *ab* describes the optional label of the edge.

#### 4.1. Example CSV

```

"t pe","id_from","name_to","label"
"node","244577237","org.huberb:tgftools:jar:1.0-SNAPSHOT",""
"node","1612496268","info.picocli:picocli:jar:4.6.1:compile",""
"node","13692003","org.junit.jupiter:junit-jupiter-api:jar:5.8.1:test",""
"node","94748968","org.opentest4j:opentest4j:jar:1.2.0:test",""
"node","1944815218","org.junit.platform:junit-platform-commons:jar:1.8.1:test",""
"node","1497558532","org.apiguardian:apiguardian-api:jar:1.1.2:test",""
"node","1584833211","org.junit.jupiter:junit-jupiter-params:jar:5.8.1:test",""
"node","1970377948","org.junit.jupiter:junit-jupiter-engine:jar:5.8.1:test",""
"node","1518752790","org.junit.platform:junit-platform-engine:jar:1.8.1:test",""
"edge","244577237","1612496268","compile"
"edge","13692003","94748968","test"
"edge","13692003","1944815218","test"
"edge","13692003","1497558532","test"
"edge","244577237","13692003","test"
"edge","244577237","1584833211","test"
"edge","1970377948","1518752790","test"
"edge","244577237","1970377948","test"

```

## 5. Use Case Convert TGF to PUML

You can convert a TGF file to PLANTUML using the command line option `-convert-puml`.

### 5.1. Example PUML

@startuml

' nodes

node "org.huberb:tgftools:jar:1.0-SNAPSHOT" as 244577237  
node "info.picocli:picocli:jar:4.6.1:compile" as 1612496268  
node "org.junit.jupiter:junit-jupiter-api:jar:5.8.1:test" as 13692003  
node "org.opentest4j:opentest4j:jar:1.2.0:test" as 94748968  
node "org.junit.platform:junit-platform-commons:jar:1.8.1:test" as 1944815218  
node "org.apiguardian:apiguardian-api:jar:1.1.2:test" as 1497558532  
node "org.junit.jupiter:junit-jupiter-params:jar:5.8.1:test" as 1584833211  
node "org.junit.jupiter:junit-jupiter-engine:jar:5.8.1:test" as 1970377948  
node "org.junit.platform:junit-platform-engine:jar:1.8.1:test" as 1518752790

' edges

244577237 --> 1612496268 : compile  
13692003 --> 94748968 : test  
13692003 --> 1944815218 : test  
13692003 --> 1497558532 : test  
244577237 --> 13692003 : test  
244577237 --> 1584833211 : test  
1970377948 --> 1518752790 : test  
244577237 --> 1970377948 : test

@enduml

## 5.2. Example Rendered PUML

## 6. Use Case Convert TGF to PUML WBS

You can convert a TGF file to PUML wbs (work breakdown structure) using the command line option `-convert-puml-wbs`.

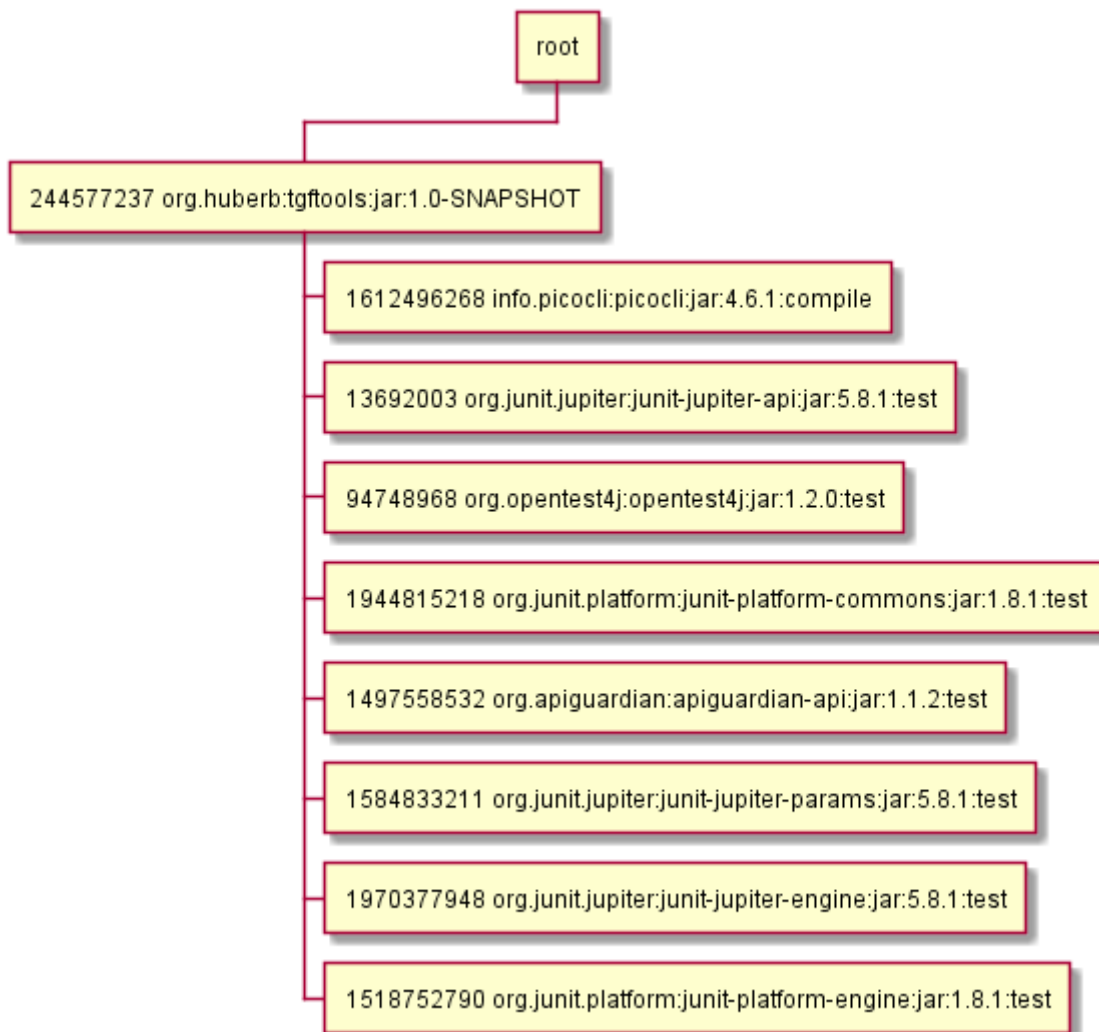

### 6.1. Example PUML WBS

@startwbs

```
* root
** 244577237 org.huberb:tgftools:jar:1.0-SNAPSHOT
*** 1612496268 info.picocli:picocli:jar:4.6.1:compile
*** 13692003 org.junit.jupiter:junit-jupiter-api:jar:5.8.1:test
*** 94748968 org.opentest4j:opentest4j:jar:1.2.0:test
*** 1944815218 org.junit.platform:junit-platform-commons:jar:1.8.1:test
*** 1497558532 org.apiguardian:apiguardian-api:jar:1.1.2:test
*** 1584833211 org.junit.jupiter:junit-jupiter-params:jar:5.8.1:test
*** 1970377948 org.junit.jupiter:junit-jupiter-engine:jar:5.8.1:test
*** 1518752790 org.junit.platform:junit-platform-engine:jar:1.8.1:test
```

@endwbs

## 6.2. Example Rendered PUML WBS

## 7. Use Case Convert TGF to PUML MINDMAP

You can convert a TGF file to PUML using the command line option `-convert-puml-mindmap`.

### 7.1. Example PUML MINDMAP

```
@startmindmap

* root
** 244577237 org.hubert:tgftools:jar:1.0-SNAPSHOT
*** 1612496268 info.picocli:picocli:jar:4.6.1:compile
*** 13692003 org.junit.jupiter:junit-jupiter-api:jar:5.8.1:test
*** 94748968 org.opentest4j:opentest4j:jar:1.2.0:test
*** 1944815218 org.junit.platform:junit-platform-commons:jar:1.8.1:test
*** 1497558532 org.apiguardian:apiguardian-api:jar:1.1.2:test
*** 1584833211 org.junit.jupiter:junit-jupiter-params:jar:5.8.1:test
*** 1970377948 org.junit.jupiter:junit-jupiter-engine:jar:5.8.1:test
*** 1518752790 org.junit.platform:junit-platform-engine:jar:1.8.1:test

@endmindmap
```

### 7.2. Example Rendered PLANTUML MINDMAP

## 8. Use Case Convert TGF to JSON

You can convert a TGF file to CSV using the command line option `-convert-json`.

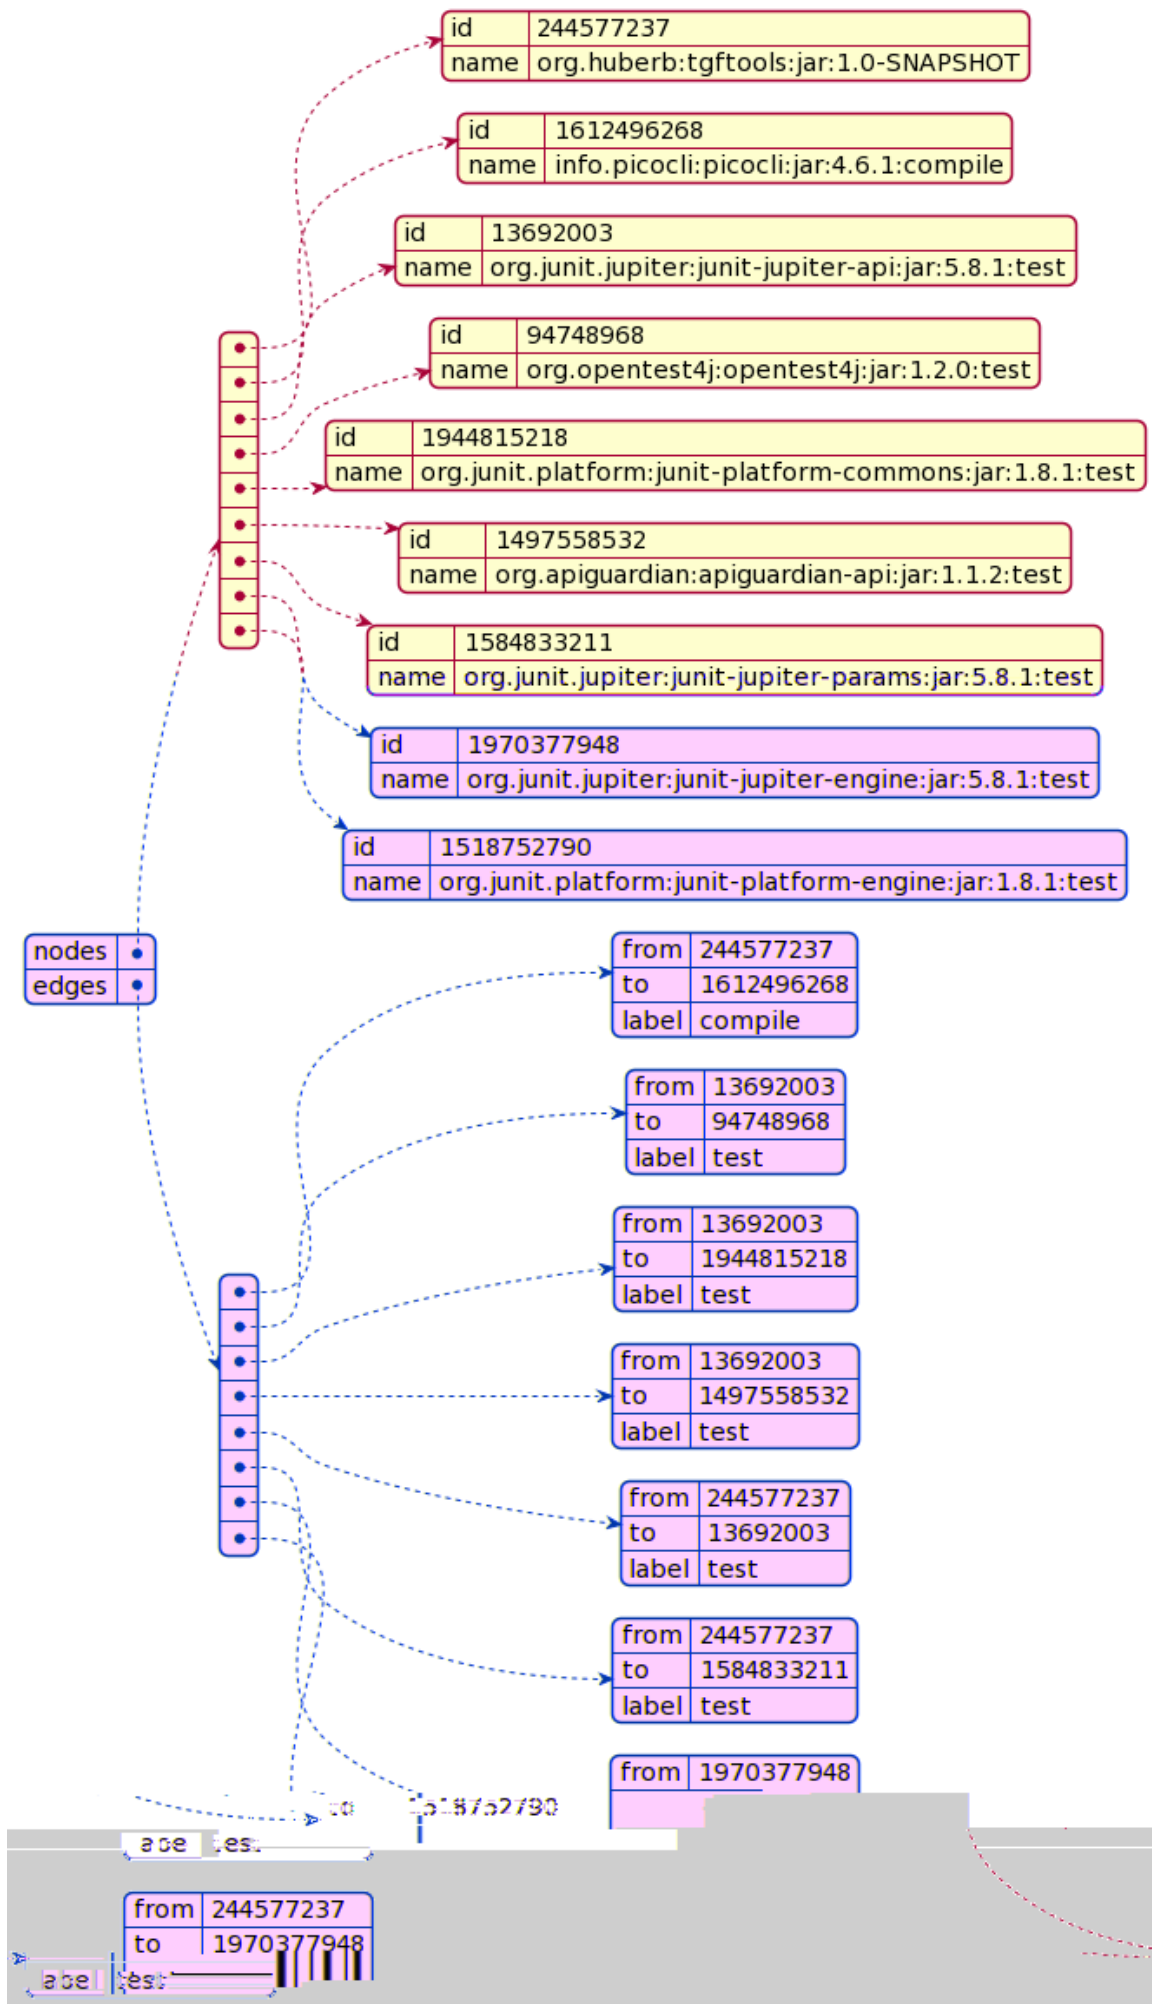

## 8.1. Example JSON

```
"nodes": [
  "id":"244577237","name":"org.hubert:tgftools:jar:1.0-SNAPSHOT" ,
  "id":"1612496268","name":"info.picocli:picocli:jar:4.6.1:compile" ,
  "id":"13692003","name":"org.junit.jupiter:junit-jupiter-api:jar:5.8.1:test" ,
  "id":"94748968","name":"org.opentest4j:opentest4j:jar:1.2.0:test" ,
  "id":"1944815218","name":"org.junit.platform:junit-platform-commons:jar:1.8.1:test" ,
  "id":"1497558532","name":"org.apiguardian:apiguardian-api:jar:1.1.2:test" ,
  "id":"1584833211","name":"org.junit.jupiter:junit-jupiter-params:jar:5.8.1:test" ,
  "id":"1970377948","name":"org.junit.jupiter:junit-jupiter-engine:jar:5.8.1:test" ,
  "id":"1518752790","name":"org.junit.platform:junit-platform-engine:jar:1.8.1:test"
],
"edges": [
  "from":"244577237","to":"1612496268","label":"compile" ,
  "from":"13692003","to":"94748968","label":"test" ,
  "from":"13692003","to":"1944815218","label":"test" ,
  "from":"13692003","to":"1497558532","label":"test" ,
  "from":"244577237","to":"13692003","label":"test" ,
  "from":"244577237","to":"1584833211","label":"test" ,
  "from":"1970377948","to":"1518752790","label":"test" ,
  "from":"244577237","to":"1970377948","label":"test"
]
```

## 8.2. Example Reendered JSON

Using plantuml feature ``@startjson/@endjson'' the JSON output is rendered

## 9. Use Case Convert TGF to YAML

You can convert a TGF file to CSV using the command line option `-convert-yaml`.

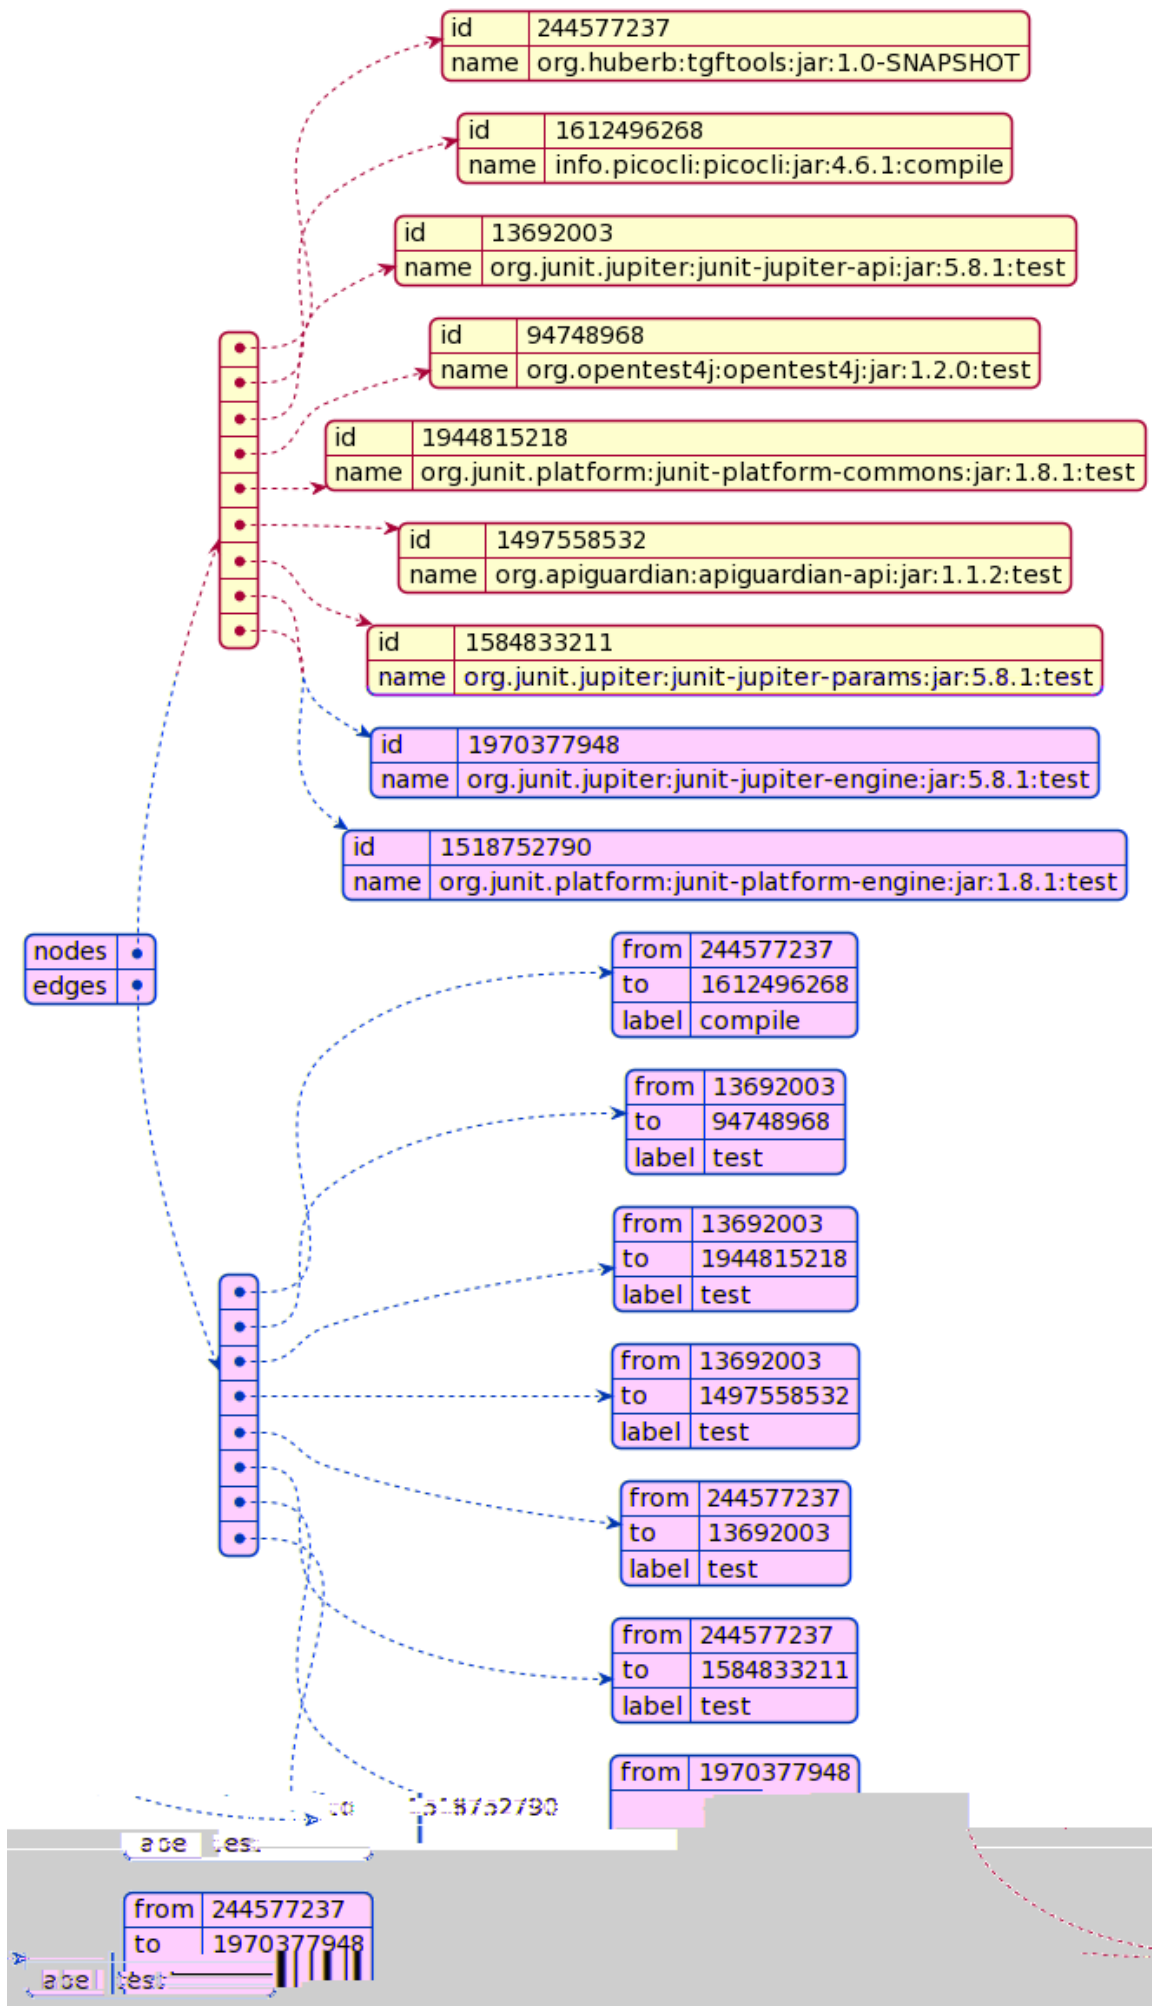

### 9.1. Example YAML

```
## YAML Template.
---
nodes:
  -
    id: "244577237"
    name: "org.huberb:tgftools:jar:1.0-SNAPSHOT"
  -
